1. How much does it cost to install a rooftop solar system for a home in Tamil Nadu?

The cost depends on your electricity consumption, required system capacity, roof suitability and equipment selection. NIRT evaluates these factors to recommend a suitable solar solution and provide a project-specific quotation.

2. How much government subsidy can I get for installing solar panels in Tamil Nadu?

Eligible residential households can receive up to ₹78,000 in central government subsidy under PM Surya Ghar. Additional Tamil Nadu state subsidy benefits may also be available, subject to current eligibility conditions.

3. How many units of electricity can a 3 kW solar system generate per day?

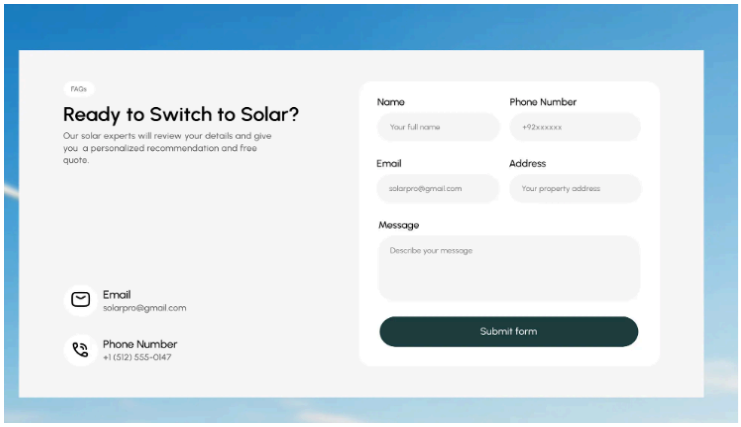

A 3 kW rooftop solar system can generate approximately 12–15 units per day under favourable conditions. Actual generation varies depending on sunlight, location, weather and rooftop orientation.

4. Can rooftop solar completely eliminate my monthly EB bill?

Solar can significantly reduce your electricity expenses, but a zero bill cannot be guaranteed. Your final bill depends on electricity consumption, solar generation, fixed charges and applicable net-metering regulations.

5. Can I install solar panels through a bank loan or EMI in Tamil Nadu?

Yes. Eligible homeowners can explore solar financing through participating banks and lenders. Loan availability, interest rates, repayment periods and EMI amounts depend on lender approval.
